Did you know?

JULY IS SARCOMA AWARENESS MONTH

Brought to you by: FHCOC Care Team Ministry

SARCOMA

Sarcoma:

- •Sarcomas are cancers that arise from the cells that hold the body together. These could be cells related to muscles, nerves, bones, fat, tendons, cartilage, or other forms of "connective tissues."
- •Sarcomas can invade surrounding tissue and can metastasize (spread) to other organs of the body, forming secondary tumors. The cells of secondary tumors are similar to those of the primary (original) cancer. Secondary tumors are referred to as "metastatic sarcoma" because they are part of the same cancer and are not a new disease.

Causes:

- •Scientists do not fully understand why some people develop sarcomas while the vast majority do not. However, by identifying common characteristics in groups with unusually high occurrence rates, researchers have been able to single out some factors that may play a role in causing sarcomas.
- •Studies suggest that workers who are exposed to phenoxyacetic acid in herbicides and chlorophenols in wood preservatives may have an increased risk of developing sarcomas.

Diagnosis:

•The only reliable way to determine whether a tumor is benign or malignant is through a surgical biopsy.

Treatment:

Surgery is the most common treatment for sarcomas. If possible, the doctor may remove the cancer and a safe margin of the healthy tissue around it. **Radiation** therapy (treatment with high-dose x-rays) may be used either before surgery to shrink tumors or after surgery to kill any cancer cells that may have been left behind. **Chemotherapy** (treatment with anticancer drugs) may be used with radiation therapy either before or after surgery to try to shrink the tumor or kill any remaining cancer cells.

Attention Ladies!
