The background of the image is a soft, out-of-focus sunset or sunrise sky, transitioning from a pale pink at the top to a warm orange and yellow at the bottom. In the foreground, the dark silhouettes of two hands are raised in a gesture of prayer or praise, with palms facing upwards. The hands are positioned on the left side of the frame, with the right hand slightly higher than the left.

March is

NATIONAL COLORECTAL CANCER AWARENESS MONTH

- ***Colorectal cancer, or CRC, is a disease of the colon or rectum, which are parts of the digestive system. Unlike most cancers, colorectal cancer is often preventable with screening and highly treatable when detected early.***
- ***Most cases of colorectal cancer occur in people ages 45 and older, but the disease is increasingly affecting younger people. Each year, about 150,000 Americans are diagnosed with this disease and more than 50,000 die.***
- ***Colorectal cancer may develop without symptoms. If you are 45 or older and at average risk, it's time to get screened.***
- ***Most colorectal cancers start as an abnormal tissue growth, called a polyp, inside the colon or rectum. With the help of screening tests, doctors can detect polyps, remove them, and prevent them from developing into colorectal cancer.***
- ***Colorectal cancer is the second most common cancer in the US among men and women combined. But it is highly treatable when it is discovered early.***
