# Did you know?

#### Hepatitis means inflammation of the liver.

The liver is a vital organ that processes nutrients, filters the blood, and fights infections. When the liver is inflamed or damaged, its function can be affected. Heavy alcohol use, toxins, some medications, and certain medical conditions can cause hepatitis. However, hepatitis is often caused by a virus. In the United States, the most common types of viral hepatitis are hepatitis A, hepatitis B, and hepatitis C.

#### MOST COMMON TYPES OF HEPATITIS ARE A, B, C, D, E

- **Hepatitis A** is a vaccine-preventable liver infection caused by the hepatitis A virus (HAV). HAV is found in the stool and blood of people who are infected. Hepatitis A is very contagious. It is spread when someone unknowingly ingests the virus even in microscopic amounts through close personal contact with an infected person or through eating contaminated food or drink. The best way to prevent hepatitis A is to get vaccinated.
- **Hepatitis B** is a vaccine-preventable liver infection caused by the hepatitis B virus (HBV). Hepatitis B is spread when blood, semen, or other body fluids from a person infected with the virus enters the body of someone who is not infected.
