Spina Bifida

Spina bifida is a condition that affects the spine and is usually apparent at birth. It is a type of neural tube defect (NTD). Spina bifida can happen anywhere along the spine if the neural tube does not close all the way. When the neural tube doesn't close all the way, the backbone that protects the spinal cord doesn't form and close as it should. This often results in damage to the spinal cord and nerves.

FACTS:

- Spina bifida is the most common congenital birth effect that causes disability.*
- There is no cure. But people are able to live with the disability.*
- Up to 68% of children with Spina bifida develop latex allergy.*
- The severity depends on where it occurs on the spine.*
- It occurs during the first 28 weeks of pregnancy.*
